RESTRICTED SUBSTANCES LIST FOR TEXTILES AND THREADS

Page 2/10

Scope of the document

This document defines the list of restricted dangerous chemical substances and testing requirements in the context of leather bracelet and textile bracelet as specified by AQC.

AQC considers in the present document 2 categories of textiles:

- **Textiles “top”**: all textiles, woven or nonwoven, located on the top layer of the bracelet.

Those textiles include “fruit textiles” (apple, pineapple, pear, ...). In compliance with ISO 15115, AQC do not consider these materials as leather because they are not from animal origin.

AQC considers the textiles “top” to be in contact with skin (free loop).

Threads are included in this category as they could be present on the external and internal faces of the bracelet and by the way have a skin contact.

- **Textiles “inside”**: all textiles, woven or nonwoven, located in the inner layer of the bracelet.

Those textiles include tearproof materials and microfibers (padding).

AQC considers the textiles “inside” not to be in contact with skin.

For the definition of the limits present in this Restricted Substances list (RSL), AQC takes into consideration all the current international regulations for dangerous substances available and select the strictest limit. The list of chemicals present in this document has been selected on the basis of a risk-based approach completed by AQC experience and knowledge.

International regulations mentioned in this document are:

Abbreviation	Regulation	Country	Comment
16CFR1303	Ban of lead-containing paint and certain consumer products bearing lead-containing paint	USA	-
EU PIC	Regulation (EU) 649/2012 concerning the export and import of hazardous chemicals	European Union	includes chemicals of Annex III of Rotterdam Convention
EU POP	Regulation (EU) 2019/1021 of the European Parliament and of the Council on persistent organic pollutants	European Union	-
GB 18401	National general safety code for textile products	China	-
JP112	Law on Control of Household Products Containing Harmful Substances	Japan	-
OChim	Ordinance on Protection against Dangerous Substances and Preparations	Switzerland	-
ORRChim	Ordinance on the Reduction of Risks relating to the Use of Certain Particularly Dangerous Substances, Preparations and Articles	Switzerland	-
Proposition 65	Safe Drinking Water and Toxic Enforcement Act	USA (California)	-
REACH XIV	Regulation (EC) no 1907/2006 of the European Parliament and of the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH)	European Union	Annex XIV Substances subject to authorisation
REACH XVII			Annex XVII Substances subject to restriction
REACH SVHC			Substances of Very High Concern

Specific AQC consideration

In the column for regulation, “AQC” stands for extra-regulatory limit set by AQC in a pro-active way:

- “AQC” alone is applied for substances without known regulation

For some substances, AQC performs testing without limit (for information) or with a limit concentration

- (AQC) after a regulation indicate that the scope has been enlarged to textile by AQC or that the limit applied by AQC is lower than requested by the more stringent regulation.

AQC limit for REACH/OChim SVHCs

Article 33(1) of REACH requires that a supplier of articles containing a SVHC included in the Candidate List for authorization in a concentration above 0.1% (w/w) has to provide relevant safety information to the recipients of these articles (Watch Brands). Upon request of a consumer, Watch Brands have to provide relevant safety information about the SVHC to this consumer (Article 33(2) of REACH). This requirement is also present in Swiss ordinance OChim, article 71.

There is no regulatory requirement to limit SVHC content in articles to 1'000 mg/kg. Nevertheless, AQC Bracelet manufacturers limit all SVHC listed substances to 1'000 mg/kg in bracelets and components.

AQC limit for Proposition 65

For substances listed in the Proposition 65 California, AQC limits consider the limit in articles present in the case law of Proposition 65 and more precisely the limits indicated in the reformulation injunctions of settlements and judgements.

AQC considers in case law: leather articles and related articles to the watch bracelet but also any other article with a related exposure scenario (skin contact).

For substances without any indication of a limit in articles, AQC performs testing of a risk-based selection of substances potentially used for leather production and keeps available for Watch Brands all the data as a support for labelling decision.

General requirements for laboratory testing

- Sample picture

Picture of textile samples or threads roll received by the laboratory have to be taken **without** plastic bag.

- Sample preparation

Textile samples are prepared as indicated in the methods indicated.
AQC does not have specific requirements.

OPTION IF TIN IS DETECTED

¹ In case of total Tin > 1 mg/kg, the following testing is performed

Substance family	Substance Name	Abbr.	CAS Number	AQC limit	Regulation	Test Method	
Organotins	Tributyltin and related compounds Incl. TBT metacrylate	TBT	several CAS incl. 2155-70-6	1 mg/kg each	Japan 112	ISO 16179	
	Triphenyltin and related compounds Incl. TPT hydroxide	TPT	several CAS incl. 76-87-9				
	All other tri-substituted tin compounds	-	Several CAS	1000 mg/kg each	REACH XVII entry 20 &		
	Dibutyltin and related compounds	DBT	several CAS incl. 683-18-1		REACH SVHC		
	Diocetyltin and related compounds	DOT	several CAS		REACH XVII entry 21		
	Di- μ -oxo-di-n-butylstanniohydroxyboran (Dibutyltin hydrogen borate)	DBB	75113-37-0
